"Nowe źródła bawełny". (Prace Inst. Ekonom. i Organ. Przem. No. 7 (16)), Warszawa, 1953, PWT, 80 pp., 97 figs., 38 tabs.

Polish Technical Abst.  
No. 1 1954  
Textile, Leather and Paper  
Industries

A prominent place is held among vegetable raw materials by fibrous plants of which only two -- flax and hemp -- are being cultivated in Poland on a major scale. This work deals with the new bast materials and is intended to assist in developing the cultivation of vegetable raw materials. The work deals in a detailed manner, on the basis of morphological and physiological features of individual species, with the conditions of cultivation, methods of cutting and preliminary processing of more than twenty species of fibrous plants originating from countries with a climate different from that existing in Poland. The author reviews the prospects of acclimatization of other plants and species, in the concluding part of this work, certain species such as *Hibiscus cannabinus*, *Bocconia frutescens*, *Spartium junceum*, *Pistacia lentiscus*, which might be used themselves for needs of textile and paper industries.

TYG. LEK. 1957, 12/20 (751-756)**

In view of bad remote results of the conservative treatment of bleeding ulcers of the stomach and the duodenum, only the time when such patients should be operated on remains a controversial problem. The impossibility of evaluating the danger and the insecurity of clinical measures in stopping the bleeding justify immediate operation, particularly as a prolonged bleeding is more dangerous than an operation even in the cases of low Hb values. The development of blood transfusion, radiology, anaesthesiology makes an accurate diagnosis possible and de-

2255

creases the operating risk to a minimum. The author's personal material of operated patients (36) was divided into 3 groups: the patients operated on up to 72 hr. from the first haemorrhage; from 72 hr. to 3-9 weeks from the appearance of haemorrhage; after the compensation of anaemia. Comparing the data concerning these groups it is stated that the good results of an immediate operation restrict the amount of necessary conserved blood and shorten the hospital treatment. Immediate operation is the method of choice in good surgical centres.

Spectrographic analysis of pure lead. <sup>17</sup> J. Downarowicz  
and W. Malecki. *Przemysl Chem.* 11, 69-81 (1955).  
spectrographic method for the detn. of 5 admixts. (Ag/Cu/  
Bi/Cd/Tl) in metallic Pb of highest purity is described.  
In the method which has been developed for the accumulator  
industry, a quartz prism spectrograph of medium dispersion  
has been used. Samples have been excited in an a.c.  
arc with a break device. As counter-electrode a rod from  
spectral pure C has been used. A 3-stage filter has also been  
applied. For photometric measurement the Zeiss micro-  
photometer has been used. The method has been de-  
veloped for the following concns. of elements: Ag 0.0018-  
0.0008, Cu 0.0016-0.001, Bi 0.0011-0.049, Cd 0.0000-  
0.050, Tl 0.0070-0.056%. Accuracy of detn. for these 5  
elements has been, resp.: 5.4, 2.7, 5.0, 3.1, and 3.5%.

4954. PRONOUNCED EOSINOPHILIA OF THE CEREBROSPINAL FLUID IN POLYRADICULONEURITIS - Eozynofilia znacznego stopnia w płynie mózgowo-rdzeniowym w zapaleniu wielokorzonkowo-nerwowym (polyradiculoneuritis) - Dowzenko A., Klin. Neurol. A.M., Poznań - NEUROL.

NEUROCHIR. PSYCHIAT. FÖL. 1958, 8/6 (775-778) Tables 1

A case of polyradiculoneuritis is described. The CSF, examined in the 2nd week of the disease, showed an increase in cells (34 lymphocytes per cu. mm.) and 33 mg. per 100 ml. protein. In the 5th week there were 19 cells per cu. mm. (23% eosinophils and 77% lymphocytes) and 68 mg. per 100 ml. protein. There was no eosinophilia in the blood. It is concluded that although eosinophilia of the CSF in polyradiculoneuritis is extremely rare, it may confirm the allergic pathogenesis of the Guillain-Barré syndrome.

WENDER, Mieczyslaw, Neurological Clinic (Klinika Neurologiczna), AM [Akademia Medyczna, Medical Academy] in Poznan (Director: Prof. Dr. A. DOWZENKO)

"Antigenic Properties of Nerve Tissue in Relation to Clinical and Experimental Neurology Problems."

Warsaw, Postepy Higieny i Medycyny Doswiadczonej, Vol 17, No 1-2, 63, pp 31-50.

Abstract: Review article connected with the research following the discovery that nerve tissue has antigenic properties, greater in white than in gray matter. The antigens have not yet been specifically identified beyond the fact that there are apparently two, one lipid and one protein. Numerous but inconclusive experimental work has been more successful in inducing rather than immunizing against encephalomyelitis and polyneuritis in animals, suggesting a complex isoallergic reaction with great similarity to the clinical hyperergic forms of these diseases. Neither could it be proven that autoantigens and autoantibodies play a decisive role in multiple sclerosis. Most of the 90 references are Western (3 refs are Polish and 15 in German)

Analytical Chemistry

A method of determining the carbon dioxide content of successive layers of air above the soil surface. A. C. Doyarenko. *Pochvovedenie* (U.S.S.R.) No. 2, 168-9 (1932).—A layer of air one meter deep above the soil was sampled at 10-cm. intervals by means of a vertical metal pipe, 2 cms. in diam. At every 10 cm. interval, smaller air inlet tubes are drilled through the pipe, each one extending to the bottom of the pipe and connected with a rubber tube 5 m. long leading to a flowmeter and from there to  $\text{Ba}(\text{OH})_2$  receptacles.

AUTHOR: Doych. R. V.

TITLE: Attenuation of waves in magnetohydrodynamics in the case of anisotropic conductivity and viscosity

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 40, no. 2, 1961, 524-526

TEXT: The attenuation of magnetohydrodynamic and magnetoacoustic waves in a plasma placed in an external magnetic field H is investigated. The plasma is assumed to be anisotropic with regard to its electrical conductivity and viscosity. The components of the electrical conductivity tensor may be expressed by a Hermitean matrix in the following way:

$$(\sigma_{ik}) = \begin{pmatrix} \sigma_1 & i\sigma_2 & 0 \\ -i\sigma_2 & \sigma_1 & 0 \\ 0 & 0 & \sigma_3 \end{pmatrix}$$
